

IIRIS - DIN MOTOR POLICY API INTEGRATION SPECIFICATION

Document Details

Document Name	IIRIS - DIN MOTOR POLICY API INTEGRATION SPECIFICATION		
Document Type	Standard	Company	Assuretech
Document Owner	Assuretech /DIN	Classification Level	Confidential

Version History

VERSION	DATE	RELEASE REMARKS
V0.0.1	02-08-2024	Base Version
V0.0.2	27-02-2025	Modification in the response
V0.0.3	29-05-2025	Modification in the request

Table of Contents

1. Introduction	4
2. API End Points	4
3. API Modules	4
3.1. Authentication	4
3.2. Generate Quotes	6
3.3. Generate Scheme	14
3.4. Generate Policy	16
4. Error Codes List	18

1. Introduction

This documents in details explains about the implementation of Motor Policy API with DIN system. This will help the customers to quickly issue policies, speed up transactions, and simplify the payment process without any delays.

2. API End Points

- Live End Point: To be provided
- Live Swagger End Point: To be provided
- Test End Point: <https://uatbrokerportal.dubins.ae>
- Test Swagger End Point: To be provided

3. API Modules

- Module to authenticate prior to requesting policy details.
- Module to generate quotes and retrieve scheme information.
- Module to select scheme and generate payment link against the chosen scheme.
- Module to monitoring payment status, converting quotes to policies, and retrieving policy details.

3.1. Authentication

All request to the API is required a JWT Bearer token. In order to obtain the token, a valid API Key is need to post the authentication request. Once the key is verified a unique token will be generate and return to the end user. Whenever the token is expired new token need to be requested.

End Point: [/api/v1/User/Auth](#)

Parameter List

Parameter	Data Type	Description	Required
username	String(100)	Predefined username provided by DIN	Yes
password	String(100)	Predefined password provided by DIN	Yes

Sample Request

Accepted Method: POST
{ "userName": "MOTOR_USER_001", "password": "123456" }

Sample Response(s)

Success Response – 200
{ "statusId": "8029", "status": 1, "statusCategory": "OK", }

```
{
  "message": {
    "en": "Token has been generated successfully!",
    "ar": "إتم إنشاء الرمز المميز بنجاح"
  },
  "data": "eyJhbGciOiJIUzI1NiIsInR5cCI6IHNpbGljeS09IiwiaWF0IjoiMTYxMjM0MjM0In0="
}
```

Failure Response – 400

```
{
  "statusId": "8032",
  "status": 0,
  "statusCategory": "BadRequest",
  "message": {
    "en": "Please ensure that all essential parameters are provided!",
    "ar": "يرجى التأكد من توفير كافة المعلومات الأساسية"
  },
  "data": "UserName, Password"
}
```

Failure Response – 404

```
{
  "statusId": "8030",
  "status": 0,
  "statusCategory": "NotFound",
  "message": {
    "en": "8030:The username or password entered is incorrect.",
    "ar": "اسم المستخدم أو كلمة المرور المدخلة غير صحيحة: 8030"
  },
  "data": null
}
```

Failure Response – 500

```
{
  "status": "8031",
  "statusCategory": "InternalServerError",
  "message": {
    "en": "Failed to process the request",
    "ar": "الطلب معالجة فشلت"
  },
  "data": null
}
```

3.2. Generate Quotes

The user has to provide a unique number, basic policy details, as well as vehicle registration information, including the chassis number (Header should contain the unique number). The system will retrieve vehicle manufacturing information from EDATA using the chassis number and save it as a quote along with other details in the request. The system returns the scheme specifics for the products that are available, including mandatory covers and optional covers.

End Point: </api/v1/Insurance/GenerateQuote>

Parameter List

Parameter	Data Type	Description	Required	Remarks
insuredName	Object	Policy Holder Name	Yes	
nationality	String(4000)	Nationality of the policy holder	Yes	
nationalId	String(20)	Identification number of the policy holder	Yes	
idExpiryDt	String	Expiry date of the identification number	Yes	dd/mm/yyyy
dateOfBirth	String	Date of birth	Yes	dd/mm/yyyy
gender	String(12)	Gender	Yes	
emirate	String(12)	Emirate of the policy holder	Yes	
emailAddress	String(100)	Email address	Yes	
mobileNumber	String(20)	Mobile Number	Yes	
licenseNo	String(30)	License Number	Yes	
licenseFmDt	String	License Inception Date	Yes	dd/mm/yyyy
licenseToDt	String	License Expiry Date	Yes	dd/mm/yyyy
chassisNumber	String(60)	Vehicle Chassis Number	Yes	
regNumber	String(30)	Vehicle Registration Number	Yes	
regDt	String	Vehicle Registration Date	Yes	dd/mm/yyyy
plateCode	String(12)	Plate Code	Yes	
plateSource	String(12)	Plate Source	Yes	
tcfNumber	String(30)	Traffic File Number	Yes	
ncdYears	String(12)	No Claim Discount Years	Yes	
trafficTranType	String(12)	Traffic Transaction Type	Yes	
isVehBrandNew	String(1)	Vehicle Brand New Yn	Yes	

agencyRepairYn	String(1)	Agency Repair YN	Yes	
bankName	String(12)	Bank Name	No	
documentLists	Object	List of mandatory documents	Yes

3.3. Generate Scheme

The user will select the preferred plan and can add additional coverage if necessary (Header should contain the unique number). The user should be given premium details (gross amount, discount, VAT, net amount for the customer), selected covers, and a link for payment in order to proceed.

End Point: </api/v1/Insurance/ChooseScheme>

Parameters List

Parameter	Data Type	Description	Required
prodCode	String(12)	Chosen Plan	Yes
covers	Object	Applicable covers chosen under the plan, it could be mandatory as well as optional.	Yes

Sample Request

Accepted Method: POST
Authorization: Bearer Token
